MAYSVILLE.

Curious History.

When George Washington, who, though only twenty-five, had won renown by his gallantry under Braddock, visited New York, he was the guest of Beverly Robinson, a young Virginian, who had come hither a few years previously and married an heiress. The latter (Jane Phillipse) owned a manor on the west side of the Hudson twenty miles in extent. This, however, was but half of the paternal estate. On the east side of the river was a similar tract belonging to the other sister—Mary Phillipse. The last mentioned tract contained the Phillipse manor house, which is at present the City Hall of Yonkers. Mary Phillipse was at the time above mentioned, living with her sister, and was rendered, by wealth and personal attractions, one of the leading toasts of the day. Report says that Washington offered his hand to the heiress, but was refused, as she did not care to bury herself on a Virginia plantation. Another suitor, Capt. Morris, of the British army, was more successful, and having won an opulent bride, he immediately constructed a mansion suitable to his new position as lord of the manor. Yonkers was too far from the city, and hence he selected the present site. Carpenters were brought from England and the building was erected in a slow and solid manner, its date of completion being 1760. The lord of the manor lived here in grand style until the revolution, however, broke up their establishment. When Washington was expelled from New York he passed several days in this vicinity, during which the Morris House was headquarters. His old flame had taken refuge with some Tory families in the vicinity and her husband (now a Colonel) was in the British army. After the war both went to England, where Mary Morris died in 1820 at the age of four score. She always felt a deep interest in Washington, and having lived to see her former lover become the chief captain of the age, she survived him twenty years, but never mentioned his name without admiration and almost emotion. Perhaps, like Maud Muller, she sometimes said to herself, "It might have been."

After the revolution the entire manor was confiscated and the Morris property was sold. Before this took place, however, Washington visited the place in company with some of his Cabinet, and a grand dinner was served by the tenant. They were deeply interested in the associations of that fearful scene where one disaster after another awaited the patriotic army. The Morris estate afterward had several owners, and was at last purchased in 1810 by Stephen Jumel, a retired French merchant, the price paid being \$10,000. He died in a few years, leaving his wife sole owner, and this woman has given the place a notoriety far greater than its previous record. Madame Jumel was fascinating and beautiful in early life, but in later years she displayed many vagaries, and as her years were prolonged to ninety they were marked by many of the weakness of old age. She and her husband had lived several years in Paris, where they gathered many curiosities which still adorn the ancient mansion. Visiting the place recently, I passed through an ancient gate and followed the road, which leads from the turnpike, till I reached the portico which, as has been remarked, has a grand prospect. On entrance one is struck with the breadth and dignity of the hall, which is rich in relics, both of furniture and art. Among the latter is a fine portrait of Madame Jumel with her family, and also a picture of Aaron Burr, who became her second husband. Other works of art adorn its walls, combining the past and the present in a very interesting manner.—*New York Letter.*

USEFUL HINTS.

SAL-VOLAVILE or hartshorn will generally restore colors taken out by acids.

BEST cure for corns: Have your boots or shoes to fit your feet, instead of making your feet fit the boots or shoes.

CHINA, when very dirty, can be cleaned with finely powdered fuller's earth dissolved in warm water, and rinsed well in cold water.

It is not well to have a wet umbrella opened out to dry, as the stretchers are apt to warp in the bent form, so giving an unsightly appearance when the umbrella is closed. The silk should be left to drain, and then gently wiped with an old silk handkerchief.

VARIOUS articles and instruments made of rubber are apt, with time, to become dry, to crack, grow brittle and lose their elasticity. Dr. Pol recommends the following simple mixture: Water of ammonia, one part; water, two parts; in which the articles should be immersed for a length of time varying from a few minutes to one-half or one hour, until they resume their former elasticity, smoothness and softness.

In dwelling houses lighted by gas, the frequent renewal of the air is of great importance. A single gas burner will consume more oxygen and produce more carbonic acid to deteriorate the atmosphere of a room than six or eight candles. If, therefore, when several burners are used, no provision is made for the escape of the corrupted air and for the introduction of pure air from without, the health will necessarily suffer.

A WRITER on timber cutting says the best time to cut timber is in the autumn. There is a great difference in the lasting qualities of wood, that cut in the fall being much superior. There is but little attention paid to this by cutters, because they well know that purchasers will not inquire what month it was cut in, and will pay just as much for timber cut in March as September; if the quality of the lumber is good and it is well sawed it is all that is required; no one looks forward to the time when the building is to be repaired and a portion of it new timbered, because it was not all cut at the same season of the year.

To CONSTRUCT an artificial filter a basin is formed, with the floor nearly level, but slightly inclined toward a center line, and made water-tight by puddling the bottom and sides with clay. On the floor is laid a series of layers of gravel, coarse at first, getting gradually finer upward; next a layer of slate chips or sea shells, then one of coarse sand, on which is placed the actual filtering layer of fine sand. The depth of the entire mass is from four to six feet. The water being admitted on the top of the sand sinks down, and is conducted by a series of tile pipes into the main drain. A filter in a clean state will pass from twelve to eighteen vertical feet of water in twenty-four hours.

ABOUT ten days after the first subscription was made to the fund for Mrs. Garfield, some one of the household informed him that a large sum of money was being raised for her in the event of his demise. "What?"—adding with evident emotion, as he turned his face to the pillow, "How kind and thoughtful! What a generous people!" He was then silent and absorbed for a long time, as if overwhelmed with the thought. I never heard him allude to the subject afterward.—*Dr. D. W. Bliss.*

A CONNECTICUT man wrapped a white sheet around him and "appeared" to a widow. She hit him in the head with an iron teakettle, and the next appearance was that of a surgeon.
